IMMERSIVE DISPLAY

Scalable Size
Take advantage of your wall space and scale up to 8 meters of digital real estate with seamless wide aspect ratios.

Dot Pattern
Non-repeating micro dot pattern that is printed at 680 dpi. With the digital pen's ability to read the pattern, this unique feature provides the most natural writing experience available for large format displays on the market today.

PCT Touch
HOYLU has a unique process of bonding the dot pattern to a pressure capacitive touch layer (PCAP) This provides 40 points of touch that is unlike any other projection- based toch functionality available.

Application Independant
Based on Windows, it is possible to run any software application on the HOYLUWALL. You can even take the HOYLUWALL online to share and collaborate using all of your productivity tools.

COMPLETE SOLUTION

HD Ultra Short Throw (UST) Laser Projector
Comfortably stand in front of the display. The UST minimizes shadows and is approximately 18" from the display wall. This laser-based light source does not require bulb replacements - making the solution virtually maintenance-free.

BYOD
Seamless device integration allows you to effortlessy share and capture content from your other devices.

HOYLU Software
With HOYLU software, you are able to share your workspace with your team for real-time collaboration and easily share workspaces through a unique 9-digit workspace ID. Your workspace is secured in the cloud with an option for password protection
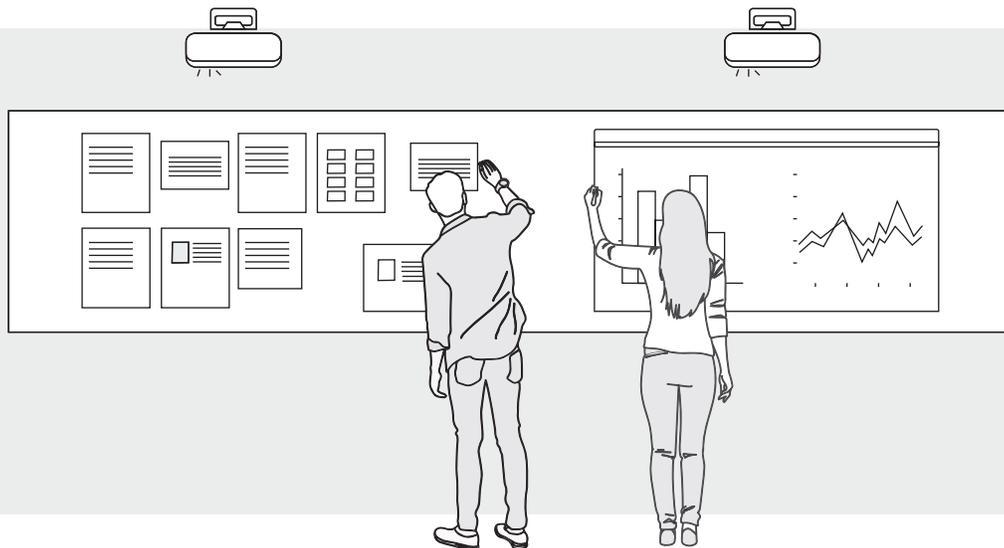

Multi-User Support
The HOYLUWALL allows for multiple users to interact on the surface simultaneously. The large, seamless digital real estate is perfect for multi-tasking or viewing content in an ultra-wide format .

SPECIFICATIONS

Standard Sizes

The HOYLUWALL is available in edge-butted or edge-blended configurations. Edge-blending is done automatically using camera feedback technology which turns a normally complicated installation and maintenance issue into a painless process that can be accomplished at the click of a button.

The HOYLUWALL supports up to four channels that span 2 meters each - allowing for configurations of 2,4,6, and 8 meters in width.
